SAMPLE REPORT — FICTIONAL BUSINESS - ILLUSTRATIVE, NOT A CLIENT RESULT

Sample AI Revenue Readiness Report™

Harbor & Pine Bistro

Restaurant · 60 seats · reservations by phone · harborandpine.example

An AI assistant asked for 'a good seafood place near the harbor that takes reservations' could not confirm Harbor & Pine's cuisine, hours or how to book, so it was likely to recommend competitors with clearer data.

Harbor & Pine Bistro is a fictional business created to show what our report contains. Every score, finding and result on this page is illustrative — it is not a client result.

Scores (illustrative)

Category	Before	After Get Found
Overall	**31/100**	**79/100**
AI Visibility	28	82
Business Understanding	45	85
Structured Data	10	90
Agent Discovery	5	80
Transaction Readiness	40	70
Payment Readiness	55	60

Findings & exact fixes

1. No structured business data *[CRITICAL]*

What AI sees: AI systems cannot reliably confirm cuisine, address, hours, price range or that the restaurant takes reservations.

Exact fix: Add Restaurant JSON-LD to every page with address, geo, openingHours, servesCuisine, priceRange, acceptsReservations and menu URL.

```
{"@context":"https://schema.org","@type":"Restaurant","name":"Harbor & Pine Bistro",
"servesCuisine":["Seafood","Italian"],"priceRange":"$$","acceptsReservations":true,
"openingHours":"Tu-Su 17:00-22:00","menu":"https://harborandpine.example/menu"}
```

2. AI crawlers are blocked *[CRITICAL]*

What AI sees: robots.txt disallows all bots except Googlebot, so GPTBot, ClaudeBot and PerplexityBot cannot read the site at all.

Exact fix: Rewrite robots.txt to allow AI search and assistant crawlers and link the sitemap.

```
User-agent: GPTBot
Allow: /
User-agent: ClaudeBot
Allow: /
```

```
User-agent: PerplexityBot
Allow: /
Sitemap: https://harborandpine.example/sitemap.xml
```

3. Menu is an image-only PDF *[HIGH]*

What AI sees: Dishes, dietary options and prices are invisible to AI because they exist only as pixels in a PDF.

Exact fix: Publish an HTML menu page with Menu, MenuSection and MenuItem markup including prices and dietary labels.

4. No llms.txt *[HIGH]*

What AI sees: There is no plain-language summary an AI model can read in one request.

Exact fix: Publish /llms.txt with the restaurant's summary, hours, booking link, menu link and policies.

```
# Harbor & Pine Bistro
> Seafood & Italian bistro on the harbor. Tue–Sun 5–10pm. Reservations online.
- [Menu](https://harborandpine.example/menu)
- [Book a table](https://harborandpine.example/reserve)
```

5. Booking only by phone *[HIGH]*

What AI sees: No machine-readable way to check availability or request a table, so an agent cannot complete the booking.

Exact fix: Connect the existing reservation platform and expose it with a ReserveAction in the schema. Whether an AI agent can complete the booking depends on that platform's integrations.

6. Hours conflict across sources *[MEDIUM]*

What AI sees: Website says closed Mondays; business listing says open, so AI systems treat the hours as unreliable.

Exact fix: Align hours on the website, schema and business listings, and add holiday hours.

7. Policies are hard to find *[MEDIUM]*

What AI sees: Deposit, cancellation and allergy policies are buried in a footer image.

Exact fix: Publish a plain-text policies page and reference it in the schema and llms.txt.

What the owner receives with Get Found - $2,997 setup + $297/month

- AI Revenue Readiness Audit
- AEO/GEO audit + remediation
- Machine-readable business identity
- Structured services & product information
- Pricing & policy clarity
- Schema.org implementation
- FAQ optimization & direct-answer content
- Sitemap, robots & crawler remediation
- AgenticReady Manifest

- Before-and-after scoring + QA
- Monthly monitoring & readiness report
- Join Group Calls — 4+ hours a month virtually for consultancy on AI and the moves you should be making

Machine-readable content does not guarantee that any AI system will recommend your business. Whether an agent can book, quote or buy depends on the AI platform and the integrations your systems support.
